

Water quality improvements continue...

As part of the city's continual water quality improvement efforts, the City of McCleary's Public Works Department continues to upgrade the city's water system.

Please remember, *WATER* is one of the most valuable resources we have. Please conserve this valuable resource wherever and whenever you can.

2015 Annual Water Quality Report

McCleary's tap water continues to meet state drinking water and Environmental Protection Agency (EPA) health standards for 2015.

Continued water quality testing results report that our system has not violated a primary maximum contaminate level (MCL) or primary water quality standard. The source of our water comes from two 90 foot deep wells located on city property just west of the SR108 turnoff, in the northern part of town. From the source, a disinfectant is injected into the system to protect us from microbial contaminants. From there the water is conveyed through the distribution system to 2 storage tanks located to the east of the city high on a hill. The fact that our drinking water is coming from one source has been a concern for some time now, hence the construction of a water treatment plant.

Drinking water, including bottled water, can contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained from the EPA's Safe Drinking Water Hotline. The sources of contaminants can be naturally occurring minerals and from the presence of animals or from human activity. Some people may be more vulnerable to contaminants in drinking water than the general population. Persons with immune system deficiencies, such as those with cancer under going chem-

otherapy, or who have undergone organ transplants, or people with HIV/AIDS or other immune system disorders, and some elderly, and infants can be particularly at risk from infections. Persons with such conditions should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection from microbial contaminants are available from the Safe Drinking Water Hotline. More information is contained in the city's Water System Plan. You can review this plan, as well as recent water testing results, by contacting McCleary City Hall.
